Controls for heaters and air conditioning systems

Perfectly equipped for maximum comfort: Webasto controls for heaters and air conditioning systems

Thermo Call – mobil and flexible

Control your Webasto yacht heater via the phone: from your mobile* or your landline, you can program the temperature and timer of your yacht heater any time you want from wherever you are. Your boat will then greet you with the warmth and cosiness you look forward to when you open the door.

* Call charges vary depending on mobile phone network and contract terms of user's network provider.

Telestart T80 – small and handy

The Telestart T80 lets you activate your Webasto yacht heater at the push of a button and from up to 1000 m away. The smallest remote control on the market, with its two-button system, is sheer child's play to use.

Handy digital timer – reliable and practical

The handy digital timer enables you to program your Webasto water heater for up to three different start times a day and, thanks to its integral alarm-clock function, it can also wake you up.

Combi timer – easy to use and customizable

The integral temperature selection function of the combi timer allows you to preheat your air heating system to the temperature you want. The three different start times a day offer you added flexibility and your own personalized comfort zone.

Standard Air Top controller – infinitely variable and 100% clear

The standard Air Top controller lets you switch all Air Top air heaters on and off and gives you infinitely variable control over them.

Thermo Top digital timer – simple and easy to use

The Thermo Top digital timer lets you switch your Webasto heating system on and off and program up to three start times a day.

Webasto Blue Cool control units – discreet and versatile

Webasto's Blue Cool control units let you choose between two operating modes: fully automatic mode in which the interior temperature is monitored and the Webasto air conditioning system cools your cabin automatically as soon as the temperature programmed is overshoot; or semi-automatic mode in which you can control the fan output so that you can, for instance, reduce the air flow at night so you can sleep peacefully.
